Exhibitor Introduction	GE's patented RadiantRed™ Technology is enhancing LED-backlit displays by enabling the richest, most vibrant red color available on LED. RadiantRed™ Technology uses potassium fluorosilicate with Mn ⁴⁺ (PSF/PFS) phosphor to generate enhanced wide-color-gamut solutions – all without sacrificing brightness or efficiency.
Exhibit Description	GE's TriGain™ KFS/PFS phosphor delivers high absorption with improved reliability compared to standard KSF/PFS phosphor. We offer a variety of absorption, particle size, and reliability to best optimize performance for our customers.
Exhibit Product	GE TriGain™ KSF/PFS Phosphor
