Exhibit Description	Pivo is a SW-HW interlocking filming kit that supports personal contents creation. It provides a smart cradle with built-in rotator and a smartphone application that controls it so that anyone can easily create unique media contents without expensive filming equipment. If you use Pivo, you can enhance the shooting function of your smartphone and use it in various situations. It provides the ability to share contents through SNS platforms such as YouTube and Facebook by shooting digital content in various forms such as automatic tracking shooting using face recognition, hybrid video (screen segmentation, subject synthesis, etc.), and time lab shooting.
Exhibit Product	 Pivo is a hardware shooting kit that supports personal content creation. Built-in rotator enables 360-degree rotational shooting, and it is used with our smartphone application to help anyone easily create unique media content without expensive filming equipment

🔖 Pivo's various apps and features

Capture & Create	It makes it easier to create one-person media content, including smart tracking, an automatic tracking function through person/object recognition, 12 quick creative modes that can produce fun content without editing, and real-time live broadcast transmission such as YouTube.
Meet	Pivo Meet is a one-on-one video call app that allows users to freely move and talk without holding a smartphone by using a smart tracking function.
Tour	Pivo Present is a professional non-face-to-face communication platform for lectures, sales pitches, and presentations, providing the ability to share and record presentation materials, presenters' faces, and voices on a single screen in a web browser.

		Present	Pivo Tour is a software solution that automates the process of creating a virtual (VR) tour, a realistic digital replica of an indoor space.
