Exhibitor Introduction	<p>Since its foundation in 1994, AP Systems has expanded its businesses and achieved growth by daringly entering into new fields that no others have entered before, armed with Top Spirit, Professional Spirit, and Venture Spirit. It has concentrated all its capabilities in semiconductor and display field equipment businesses, which Korea maintains its number 1 position in the world in, to head toward becoming a global equipment company.</p> <p>In March 2017, AP Systems went through a spin-off and converted into a holding company to become APS Holdings. APS Holdings will raise the transparency of the management structure of affiliated companies including DE&T, KORNIC Automation, Zenith World, and NEXTIN and spread the success DNA of AP Systems into all affiliated companies to serve as a strong foothold that will allow its affiliated companies to leap forward as leading company groups.</p>

The 22nd International Meeting on Information Display
August 23-26, 2022 / BEXCO, BUSAN, KOREA

	<p>Furthermore, based on our core capabilities in the semiconductor and display related fields, we will discover new businesses and concentrate our efforts into making appropriate investments to contribute to the future 4th industrial revolution. Through this, we will endlessly put in our efforts to maximize the values of our company and stockholders.</p> <p>All of our employees will do their best so that APS Holdings and all APS affiliated companies will become companies that can receive trust and selection in the global market. We would like to ask for your support and interest.</p>
Exhibit Description	Film-type transparent LED display is a technology that makes the light-emitting display itself transparent so that objects behind the screen can be seen.
Exhibit Product	Film type transparent LED display
