Fax	041-589-8120	
Exhibitor Introduction	<p>Korea Institute of Industrial Technology is a commercialization-oriented research institute established to support small and medium-sized enterprises. We are striving to revitalize manufacturing innovation in local industries facing internal and external challenges. We develop core technologies in three key research areas (intelligent root technology, human-centric production technology, and sustainable technology) and we are operating a system of three research institutes and seven regional headquarters to transfer the results to the production sites.</p> <p>In addition, we have been advancing the materials, parts, and equipment industries related to root industries, while reorganizing the organization to support the transition to a digital and low-carbon economy. We are upgrading the previous decentralized research base to a mega-platform research system, foundation building-oriented support to a substantial corporate profit generation platform, and individual and divisional business promotion to a strategic network synergy driving method.</p>	
Exhibit Description	<ol style="list-style-type: none">1) Infrastructure establishment for development and production support of advanced display materials with Chungnam Techno Park2) Introduction to display inkjet process technology and printed electronics technology	
Exhibit Product	Posters
