Exhibitor Introduction	The Advanced Display Research Center (ADRC) was designated as a national research institute in 2001 to support the development of processes and products required for industry, research and university research, and to advise on the difficulties encountered during research and development. We are also presently teaching the recent research trends, basic technologies and new technologies by inviting specialists from domestic and foreign companies and universities in various fields of information display, and we are firmly holding the position of a leading research institute in the field of display research. Through the intensive research investment over the past several years, the ADRC has been able to technologies using thin-film transistors (TFTs) array, a core technology for next-generation displays for research and development of new technologies. In addition, based on the equipment and technologies, AMLCD, AMOLED and Flexible Display are manufactured and various measurement equipment were built to evaluate the materials and devices.	
Exhibit Description	The introduction of ADRC will be explained and the products developed in ADRC will be demonstrated such as stretchable, flexible, transparent displays and so on.	
Exhibit Product	Active Matrix Panels (AM Panels); not decided yet. Flexible, Transparent display. μ -LED on TFT backplane, and so on.
