| Exhibitor Introduction | <p>Korea Vac-Tec Co., Ltd., established in 1987, specialized in the design and manufacturing of customized vacuum systems for research, process development, and mass-production applications. Based on decades of accumulated experience in vacuum equipment and process technologies, the company develops systems specifically configured to meet each customer's process requirements.</p> <p>One of our products, PeLab - Vacuum Deposition Equipment for PeLED, is designed by thoroughly analyzing the materials, device structures, and deposition processes the customer intends to implement. We integrate chamber configurations, deposition sources, substrate transfer, process control, and analysis functions to suit the specific process objective. We possess design and development capabilities scalable from R&amp;D systems to mass production equipment, and we support customers' process development and transition to mass production through rapid and proactive technical responses.</p> |                                                                                     |

# iMiD 2026

The 26th International Meeting on Information Display  
August 18-21, 2026 / BEXCO, BUSAN, KOREA

|                            |                                                                                                                                           |
